

SKYTZMATIC

OFFICIAL ELECTRONIC PRESS KIT — 2026

Loyalty Over Money Records | Bus 20 Productions | Long Beach, California

ARTIST OVERVIEW

Skytzmatic is a Long Beach, California emcee, USAF veteran, independent catalog owner, and creator operating under the Loyalty Over Money philosophy. Known for raw boom bap production, dense lyricism, and a strict no-hooks, no-features approach, Skytzmatic's music blends veteran discipline, street realism, social commentary, and personal experience into a catalog built for listeners who value substance over trends.

After stepping away from music for years to focus on family and life responsibilities, he returned in 2026 to launch Backpack Gangsta Rap Vol. 5, a catalog-driven relaunch focused entirely on organic growth, ownership, and long-term intellectual property development.

No paid promotion. No manufactured hype. No gimmicks. Only work.

THE STORY

The Skytzmatic story began long before streaming platforms existed. With roots dating back to the late 1990s, Skytzmatic built an independent catalog through freestyle battles, underground releases, and group projects including the WMD era from 2000-2003.

After years away from music, life took priority. Family came first. A son was raised. Responsibilities were fulfilled. Military service shaped perspective. Leadership experience shaped discipline.

In May 2026, Skytzmatic officially reactivated the catalog and began rebuilding from the ground up. Within weeks, the music had reached listeners across multiple countries with no paid promotion — proving that authentic audience growth remains possible when the music connects.

Today, the mission extends beyond music releases. The goal is to build a sustainable ecosystem of music, storytelling, visual identity, ownership, and intellectual property designed to compound over time.

BRAND PHILOSOPHY

Loyalty Over Money.

The mission is not maximum reach. The mission is authentic reach. Ownership matters. Catalog matters. Relationships matter. The goal is not to chase algorithms. The goal is to build assets that remain valuable long after algorithms change.
